1 Introduction

INTEGRA CONTROL is a mobile application for remote control of the INTEGRA / INTEGRA Plus alarm system. The ETHM-1 Plus and/or INT-GSM / INT-GSM LTE module must be connected to the control panel. The mobile device on which the application will be used must have access to the Internet.

Only one user of the application at a time may connect to the control panel via one communication module. The communication module does not allow multiple users to operate the control panel simultaneously. If you want multiple users to be able to connect to the control panel simultaneously, connect more communication modules to the control panel.

2 Features

- Status check of partitions, zones and outputs.
- Ability to arm / disarm the system or clear alarm.
- Ability to bypass / unbypass the zones.
- Control of the outputs.
- Overview of the troubles.
- Access to the event log.
- Full functionality of the alarm system keypad.
- Ability to implement automation functions by means of macro commands.
- Secure, encrypted connection to the control panel.
- Push notifications with option of personalized configuration.
- Option to use the SATEL connection setup service.
- Video footage from IP cameras.
- Editing settings of the partition timers and system timers.
- Editing thermostatic outputs settings.

3 Required settings of the ETHM-1 Plus / INT-GSM / INT-GSM LTE module

You can configure the module settings using the DLOADX program: "Structure" window → "Hardware" tab → "Keypads" branch → *[module name]*.

- Enable the "GUARDX" option.
- Enter the "GUARDX key". It is a string of up to 12 alphanumeric characters (digits, letters and special characters). Click on the icon  to view the key entered.
- Enable the "Connection via Satel server" option if connection is to be established via the SATEL server.
- Enable the „Push notifications" option if the application is to notify the user about the control panel status by means of push messages (see: "Notifications").

Comments:

Fig. 1. DLOADX program. Configuration of the ETHM-1 Plus + INT-GSM / INT-GSM LTE module.

ETHM-1 Plus module / ETHM-1 Plus + INT-GSM / INT-GSM LTE module

- Configure the network settings of the ETHM-1 Plus module.

If the application is to connect to the ETHM-1 Plus module via the SATEL server, the DNS server address must be programmed in the module (the "Obtain DNS server address automatically" option must be disabled).

- If the INT-GSM / INT-GSM LTE module is connected to the ETHM-1 Plus module, configure the settings related to the transfer of data via cellular network.

The DNS server address must be programmed in the INT-GSM / INT-GSM LTE module.

- Enable the "GSM" option.

- Set the number of the TCP port used for communication if connection is to be established directly with the module.

If the INT-GSM / INT-GSM LTE module is connected to the ETHM-1 Plus module, data transfer via cellular network is used only when connection over Ethernet cannot be established.

INT-GSM / INT-GSM LTE module

- Configure the settings related to the transfer of data via cellular network.

The DNS server address must be programmed in the module.

- Enable the “INTEGRA CONTROL” option.

Fig. 2. DLOADX program. Configuration of the INT-GSM / INT-GSM LTE module.

3.1 QR code

The communication settings can be easily imported to the INTEGRA CONTROL application by using a QR code. You can generate the QR code in the DLOADX program: “Structure” window → “Hardware” tab → “Keypads” branch → [module name] (Fig. 1).

You will be able to generate the QR code only after you have enabled the “Connection via Satel server” option and the ID number has been generated by the server.

Click on . A window with the QR code will open. Underneath the QR code you will find a password required when scanning the code (press and hold  to view the password).

You can save the code to a JPG file after clicking on .

Give the QR code and the password to the INTEGRA CONTROL application user.

4 Installation and first start of the application

You can download the INTEGRA CONTROL application from the “App Store”.

On first start of the application:

1. The application will request your permission to send notifications. You can either allow notifications or not (you can change the settings later).
2. A tutorial will be displayed. Tap “Skip” to proceed.
3. The “Objects” screen will open (see “Objects”).

5 Application settings

Tap  to open the application settings screen (Fig. 3):

Password protected – when this option is enabled, access to the application is password protected. You will be asked to set a password after you have enabled this option.

Instead of giving the password, you can scan your fingerprint on startup of the application, if such user authorization method is supported on your mobile device.

New password – tap to change the access password to the application. This function is available if the “Password protected” option is enabled.

Application data

Backup to file – tap to save the control panel data to file.

Restore from file – tap to download the control panel data saved to file.

Sounds – tap to configure the settings for sounds to indicate different events.

Version – information about the application version.

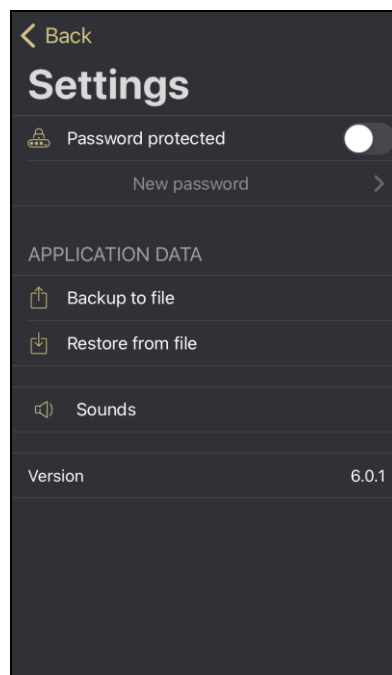

Fig. 3. INTEGRA CONTROL application. Application settings.

6 Objects

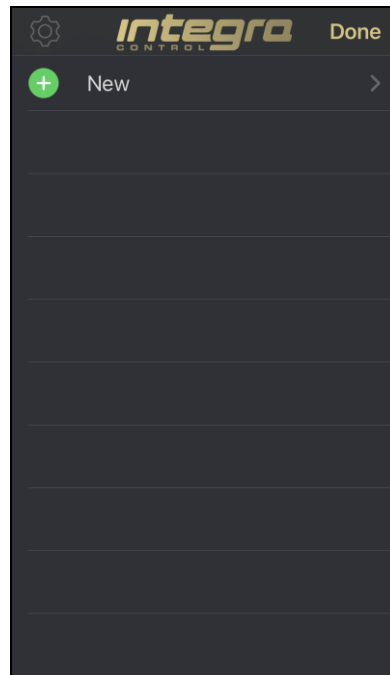

Fig. 4. INTEGRA CONTROL application. “Objects” screen before adding control panel.

After first start of the application, the screen will show the button “ New”. Tap the button to add a control panel (see: “Adding a control panel”).

The added control panels are displayed on the „Objects” screen. After swiping left the control panel’s name, the button  will appear. Tap it to display the QR code containing the settings related to communication with the control panel. Before the code is displayed, you will be asked to set a password required to scan the QR code on another mobile device. This allows you to easily import configured communications settings from one mobile device to another.

If you tap the “Edit” button:

- the following buttons will be displayed:
 - “ New” – tap to add a new control panel,
 -  – tap to delete a control panel (see: „Deleting a control panel”),
 -  – hold and drag the button up or down to change the order of the control panels on the screen,
 - “Done” – tap to exit the edit mode.
- you can tap the control panel’s name to edit its settings in the application.

6.1 Adding a control panel

Fig. 5. INTEGRA CONTROL application. Control panel settings.

1. Configure the settings for communication with the ETHM-1 Plus / INT-GSM / INT-GSM LTE module. You can enter the settings manually (see: “Adding communication settings manually”) or import them by using a QR code (see: “Importing communication settings by using a QR code”).

The QR code contains the settings required for establishing connection with the control panel via the Satel server.

You can obtain the QR code from the installer or a user who has already entered the control panel data to the mobile application.

2. Enter the alarm system's name. It will help you to identify the alarm system while using the application (you can define settings for multiple alarm systems).
3. Define the language of the control panel.
4. Define how the macro commands should be handled. By default, macro commands will be imported from the module (they will be downloaded during the first connection). If the macro commands are not to be, tap the screen in the “Import macros” area and change the settings (see: “Adding macro commands”). Macros settings can be changed at any time while using the application.
5. If you want to watch video footage from IP cameras in the application, enter the addresses of cameras (see: “Adding a camera”). If you do not want to use the application to watch video footage from IP cameras, skip this step. You can add new IP cameras or change the settings for cameras already added at any time while using the application.
6. Tap “Save” to save the settings.
7. A newly added control panel will appear on the list on the “Objects” screen (Fig. 6).

Fig. 6. INTEGRA CONTROL application. List of added control panels.

6.1.1 Adding communication settings manually

Connection to ETHM-1 Plus module

Direct communication with the module

1. Enter the network address of the module.
2. Enter the number of TCP port.
3. Enter the data encryption key – the same as in the module (“GUARDX Key”).

Communication via the SATEL server

1. Enable the “Server Satel” option.
2. Enter the module’s MAC address.
3. Enter the module’s ID number (identifier assigned to the module by the SATEL server).
4. Enter the data encryption key – the same as in the module (“GUARDX Key”).

You can check the network address, MAC address and ID number in the LCD keypad (by using the “IP/MAC/IMEI/ID” user function available in the “Tests” submenu – for a description of the function please refer to the user manual for the control panel).

Connection to INT-GSM / INT-GSM LTE module

1. Enable the “Server Satel” option.
2. Enter the IMEI number of the module cellular telephone.
3. Enter the module’s ID number (identifier assigned to the module by the SATEL server).

You can check the IMEI and ID numbers in the LCD keypad (“IP/MAC/IMEI/ID” user function available in “Tests” submenu – see user manual for control panel).

4. Enter the data encryption key – the same as in the module (“GUARDX Key”).

6.1.2 Importing communication settings by using a QR code

1. Tap .
2. Allow the application to access the camera.
3. Scan the QR code.
4. Enter the password protecting the QR code and tap “Done”.

6.2 Deleting a control panel

1. Tap “Edit”.
2. Tap  in front of the control panel name.
3. Tap “Delete”.

6.3 Adding macro commands

Macro commands enable automated operation of the alarm system and the connected devices. By default, macro commands will be imported from the module when the application is first connected to the control panel.

If you do not want the application to import macro commands, tap “Import macros” and then “No macros”.

If you want to import macro commands from the module, tap “Import macros” and then “Import from system”. The macros should be imported after each change of macro command settings in the module.

6.4 List of cameras

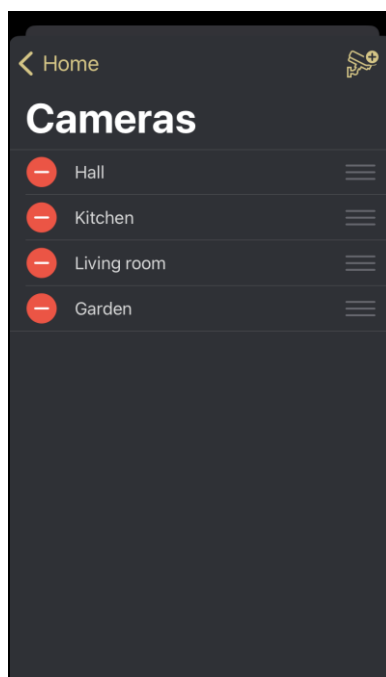

Fig. 7. INTEGRA CONTROL application. “Cameras” screen.

The  button will be available in the top right corner of the screen after the “Cameras” screen is displayed. Tap the button to add a new camera (see: “Adding a camera”).

Cameras already added are displayed on the “Cameras” screen (Fig. 7). Tap the button  in front of the camera name to delete the camera. Tap the camera name to edit its settings. Tap “Back” to return to the settings screen for the selected control panel.

6.4.1 Adding a camera

Cameras added to the INTEGRA CONTROL application must have the following address: `rtsp://xxx.xxx.xxx.xxx:yyyy/zzzz`.

where “xxx.xxx.xxx.xxx” – IP address or domain name, “yyyy” – camera port, and “zzzz” – access path.

The following parameters are required for adding an IP camera:

- camera address (IP address or domain name),
- camera port,
- access path to image.

The INTEGRA CONTROL application supports only cameras with RTSP protocol.

6.4.1.1 Add manually

1. On the “Objects” screen, tap “Edit”.
2. Tap the control panel.
3. Tap “Cameras”. The cameras screen will be displayed.
4. Tap  and select “Add manually”. The screen for adding a camera will open (Fig. 8).
5. In the “Name” field, enter the camera name.
6. The camera protocol – rtsp – is displayed in the “Protocol” field.

Fig. 8. INTEGRA CONTROL application. Screen for adding a camera with no settings defined.

7. In the “Host” field, enter the camera address (IP address or domain name) (xxx.xxx.xxx.xxx).
8. In the “Port” field, enter the port number used by the camera (yyyy).

Leave this field blank if the camera does not use a port number.

9. In the “Mainstream” field, enter the access path to high resolution video (zzzz).
10. In the “Substream” field, enter the access path used for quick preview of lower resolution video.
11. If the camera requires logging in, enter the login in the “User” field and user password in the “Password” field.

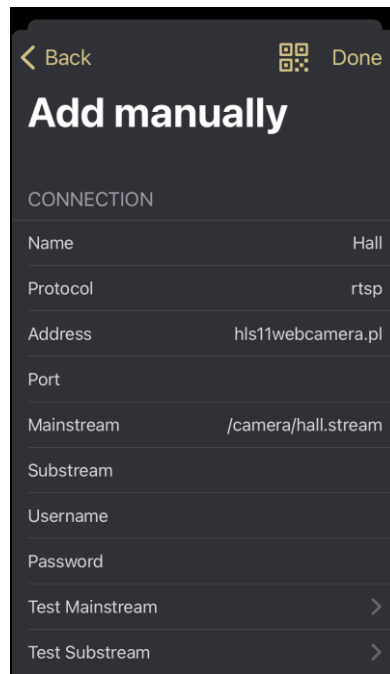

It is advised to protect cameras with login and password in order to prevent unauthorized access.

12. Tap “Test Mainstream” to check the connection to camera by using the path provided in the “Mainstream” field.
13. Tap “Test Substream” to check the connection to camera by using the path provided in the “Substream” field.
14. In the “Relations” section you can assign to the camera partitions / zones / outputs of the control panel, which you will be able to control while watching video footage from that camera.

Test Substream >

Fig. 10. Camera address entered as a domain name. The presented settings are just an example.

6.4.1.2 Search on the network

1. On the “Objects” screen, tap “Edit”.
2. Tap the control panel.
3. Tap “Cameras”. The cameras screen will be displayed.
4. Tap  and select “Search on the network”. The app will search for cameras connected to the same network as the mobile device.
5. Select a camera from the list of found cameras.
6. Enter login and password if access to the camera is protected.
7. The video streams will be displayed. The video quality of each stream may differ. Tap “OK” to add the camera.

6.4.1.3 Import

1. On the “Objects” screen, tap “Edit”.
2. Tap the control panel.
3. Tap “Cameras”. The cameras screen will be displayed.
4. Tap  and select “Import”.
5. Scan the QR code of the camera.
6. Enter password if access to the camera is protected.
7. The camera will be added.

6.4.1.4 Link

1. On the “Objects” screen, tap “Edit”.
2. Tap the control panel.
3. Tap “Cameras”. The cameras screen will be displayed.
4. Tap  and select “Link”.
5. Enter the link to the camera and tap “OK”. The camera will be added.

6.5 Establishing communication with the control panel

If the application is not connected to the control panel, tap the control system's name in order to establish connection with the control panel.

If only one alarm system is added to the application, it will connect to the control panel automatically after startup.

If the user is not remembered by the application or has been logged out, the application will ask you to enter the user code after it has established connection to the control panel. Check "Remember me" if you want the user to be automatically logged in after the application has connected to the control panel.

When communication with the control panel has been established for the first time, downloading of macros and names (of partitions, zones, outputs, expander modules, timers, phones and users) will start.

Macros and names may also be downloaded when communication with the control panel has been established after a longer break.

After communication has been established with the control panel, the screen set in the first position on the shortcut bar will be displayed (see: "Shortcut bar"). By default, it is the "Macros" screen.

7 Information about the control panel

Tap the top of the screen and swipe down to display information about the currently connected control panel:

- name,
- user logged in,
- control panel model, firmware version, release date (if new firmware version is available, a prompt to update firmware),
- model of communication module, firmware version, release date (if new firmware version is available, a prompt to update firmware).

8 Operating the alarm system

8.1 Status bar

The status bar is displayed on the top of the screen. The following icons are available:

– tap to disconnect from the control panel.

– trouble indicator. It is flashing when there is trouble condition in the alarm system (or the alarm memory condition if option "Grade 2" or "Grade 3" was enabled by the installer). Tap to go to the "Troubles" screen.

– arming indicator:

- ON – all partitions controlled from the app are armed;
- flashing – some partitions controlled from the app are armed or exit delay countdown is running.

Tap to go to the "System" screen, "Partitions" tab.

 – service mode indicator. It is flashing when service mode is entered. Tap to go to the “Keypad” screen.

– alarm indicator:

- ON – alarm;
- flashing – alarm memory.

Tap to go to the “System” screen, “Alarms” tab.

8.2 Shortcut bar

On the bottom of the screen there is a shortcut bar where selected icons are displayed. The shortcut bar allows you to quickly access the selected screens in the application. You can customize the bar to your needs (see: “Customizing the shortcut bar”).

Click “More” to view the widgets (Fig. 11):

Macros – tap to go to the “Macros” screen.

System – tap to go to the “System” screen.

Control – tap to go to the “Control” screen.

Cameras – tap to go to the “Cameras” screen.

Troubles – tap to go to the “Troubles” screen.

Events – tap to go to the “Events” screen.

Timers – tap to go to the “Timers” screen.

Keypad – tap to go to the “Keypad” screen.

Notifications – tap to go to the “Notifications” screen.

Help – tap to go to information about the application.

8.2.1 Customizing the shortcut bar

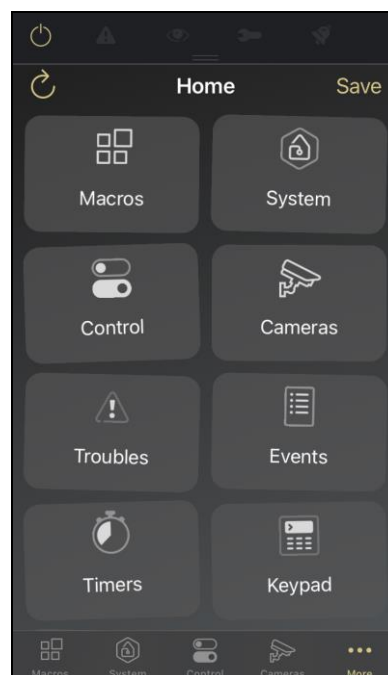

Fig. 11. INTEGRA CONTROL application. The list of available widgets. Editing the shortcut bar.

1. Tap “More”.
2. Tap “Edit”. The list of available widgets will change its layout (Fig. 11).
3. Hold and drag the widget to move it.

The icons of the first four widgets are displayed on the shortcut bar on the bottom of the screen.

The first widget shows which screen is displayed when the app connects with the control panel.

4. Tap “Done” to confirm the changes.

8.3 Macros

This screen allows you to operate the control panel by using macro commands. On the screen you will find macro commands imported by the application (Fig. 12).

Swipe the screen left or right to display a different group of macros.

Tap the macro to run it. The Face ID / Touch ID / password authentication may be required (depending on the iOS system version).

8.3.1 Running macros from the “Shortcuts” app

You can use the “Shortcuts” app available in the iOS system to run macros. You can add macros to the app and group them. You can run them manually or with a voice command (using Siri).

If you want to run macros with a voice command, make sure that their names are in a language supported by Siri.

Fig. 12. INTEGRA CONTROL application. “Macros” screen.

8.4 System

Use the buttons on the top of the screen:

– tap to display the list of partitions.

– tap to display the list of zones.

– tap to display the list of zones to which ABAX 2 / ABAX devices with temperature sensors are assigned.

– tap to display the list of zones that are bypassed / violated / tampered / generated an alarm.

8.4.1 Partitions

This screen shows the list of partitions (Fig. 13). You can control them (see: “Controlling partitions”).

The icon displayed next to the partition name provides information on its current status:

– disarmed,

– exit delay countdown is running,

– armed – mode: “full”,

– armed – mode: “full + bypasses”,

– armed – mode: “without interior”,

– armed – mode: “without interior and without entry delay”,

– temporarily blocked,

– entry delay countdown is running,

– fire alarm,

– alarm. The number of alarms is displayed next to the icon.

The icon is displayed next to the partition name. Tap it to view the list of events from the selected partition (see: “Events”).

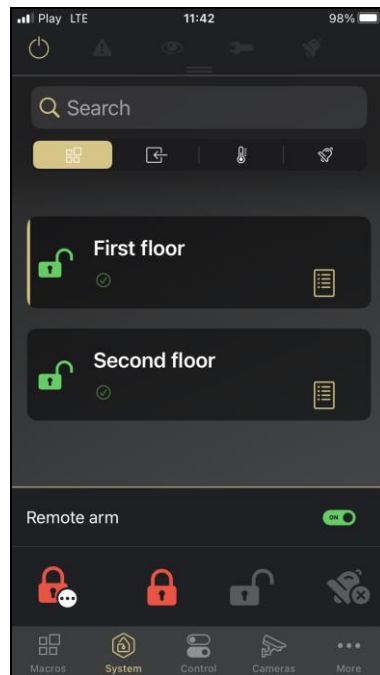

Fig. 13. INTEGRA CONTROL application. The list of partitions.

8.4.2 Controlling partitions

If you tap the partition name, the following icons will be displayed on the bottom of the screen (you can tap several partitions to select them):

- tap to arm the partition / partitions. You can select one of the arming modes:

- Full;
- Full + bypasses;
- Stay;
- Stay, delay=0.

- tap to arm the partition / partitions.

- tap to disarm the partition / partitions.

- tap to clear alarm in the partition / partitions.

8.4.3 Zones

This screen shows the list of zones (Fig. 14). You can bypass them (see: „Bypassing zones”). The icon displayed next to the zone name provides information on its current status:

- zone inactive (not violated),

- zone violated,

- trouble: long violation,

- trouble: no violation,

- isolated,

-  – inhibited,
-  – tamper alarm,
-  – alarm,
-  – masking,
-  – masking memory.

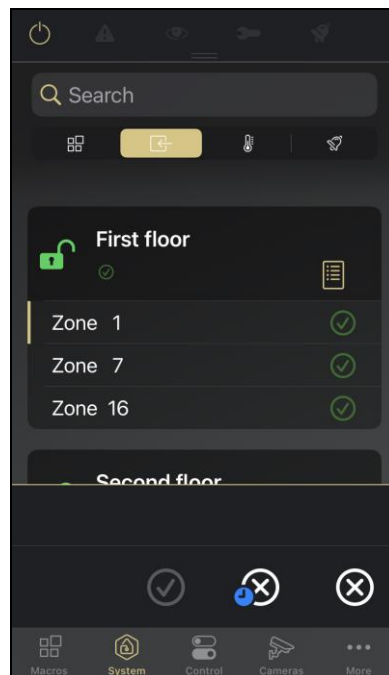

Fig. 14. INTEGRA CONTROL application. “Zones” screen.

8.4.4 Temperatures

This screen shows the list of zones to which ABAX 2 / ABAX devices with temperature sensors are assigned. Temperature information provided by the sensors is also displayed.

You can bypass the zones (see: “Bypassing zones”).

8.4.5 Bypasses / violations / tampers / alarms

This screen shows the list of zones that are bypassed / violated / tampered / generated an alarm.

You can bypass the zones (see: “Bypassing zones”).

8.4.6 Bypassing zones

Tap the zone name. The following icons will be displayed on the bottom of the screen:

-  - tap to unbyypass zone,
-  - tap to inhibit zone,
-  - tap to isolate zone.

8.4.7 Zone searching

In the search field enter the name or number of the zone you are searching for.

8.5 Control

Use the buttons on the top of the screen:

– tap to display the list of controllable outputs.

– tap to display the list of roller shutter outputs.

– tap to display the list of thermostatic outputs.

– tap to display the list of non-controllable outputs.

– tap to display the list of all outputs.

8.5.1 Outputs

This screen shows the list of controllable outputs (Fig. 15). You can control them.

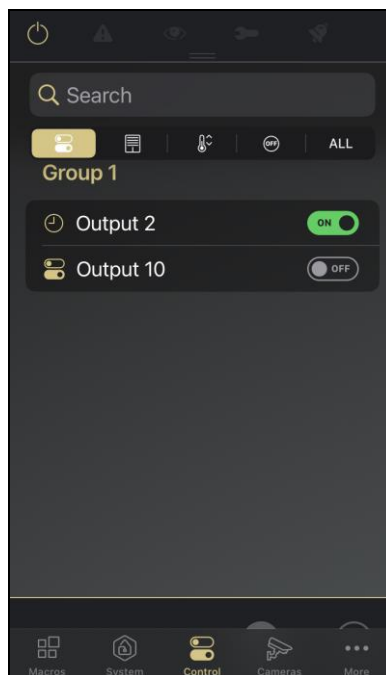

Fig. 15. INTEGRA CONTROL application. “Control” screen.

One of the following icons will be displayed next to the output name:

– controllable output turned off. Tap to turn it on.

– controllable output turned on. Tap to turn it off.

– non-controllable output turned off.

– non-controllable output turned on.

– roller shutter not moving. Tap to control it.

– roller shutter up. Tap to control it.

– roller shutter down. Tap to control it.

24.5°C

– thermostatic output turned off. Tap to edit its settings.

19.5°C

– thermostatic output turned on. Tap to edit its settings.

Temperature information is provided by wireless devices with temperature sensors.

8.5.1.1 Controlling the roller shutter

Tap the roller blind name. The following icons will be displayed on the bottom of the screen:

- tap to move the roller shutter up.

- tap to move the roller shutter down.

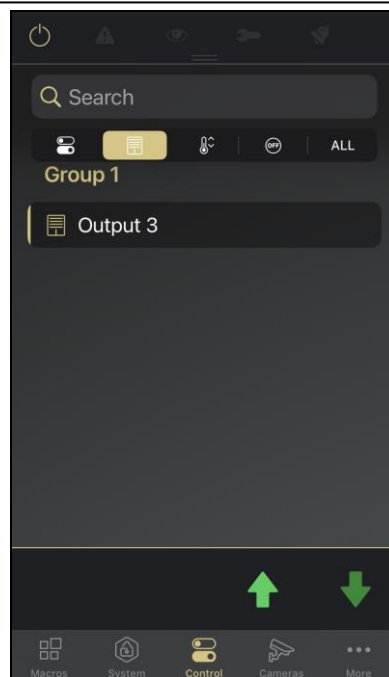

Fig. 16. INTEGRA CONTROL application. "Roller Shutters" screen.

8.5.2 Thermostatic outputs

This screen shows the list of thermostatic outputs (Fig. 17). You can edit their settings.

Fig. 17. INTEGRA CONTROL application. The list of thermostatic outputs.

8.5.2.1 Editing the thermostatic output settings

1. Tap the name of the thermostatic output whose settings you want to edit.
2. If you want to edit the first temperature threshold (economic temperature), tap the widget with the  icon. Slide your finger up or down the screen to set the temperature.
3. If you want to edit the second temperature threshold (comfortable temperature), tap the widget with the  icon. Slide your finger up or down the screen to set the temperature.
4. If the forcing output is available and it is controllable, you can turn it on to force the first temperature threshold (economic temperature).
5. If you want to change the settings of the timer controlling the temperature thresholds, tap the timer name – see: “Timers” (when the timer is turned on, the second temperature threshold is active).
6. Tap “Save” to save changes.

The yellow dot on the widget means that the temperature threshold is active.

The first temperature threshold (economic temperature) is active when all control timers are turned off or the forcing output is turned on. If the first temperature threshold is active, the output will be turned on when the temperature drops below the economic temperature.

The second temperature threshold (comfortable temperature) is active when the control timer is on and the forcing output is turned off. If the second temperature threshold is active, the output will be turned on when the temperature drops below the comfortable temperature.

If the output forcing the T1 temperature is turned on, the first temperature threshold is active (economic temperature) regardless of the timers.

The temperature displayed in the bottom right corner of the screen is the temperature currently registered by the sensor.

The thermostatic output settings are used to adjust the operating parameters of the ART-200 wireless radiator thermostats.

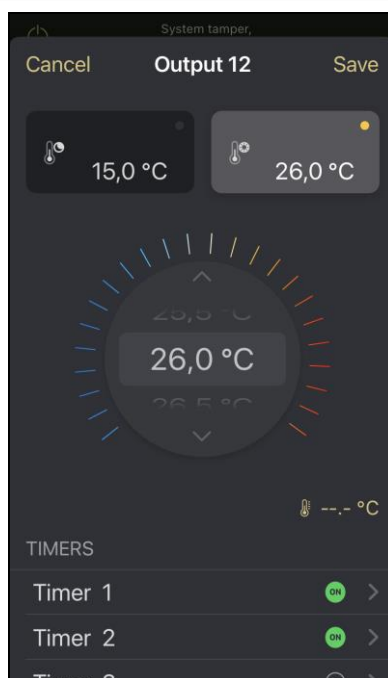

Fig. 18. INTEGRA CONTROL application. Editing the thermostatic output settings.

8.5.3 Output search

In the search field enter the name or number of the output you are searching for.

8.6 Timers

The timers enable some functions to be automatically executed by the control panel (arming/disarming, turning on/off devices connected to outputs, etc.). The timer compares the time to that of the control panel clock and executes the selected function at the programmed time.

8.6.1 Editing system timers

1. Tap the timer name in the “Timers” section.
2. Select a day of the week / every day / exception. The screen with timer settings will open.
3. Set the timer start/end time. To set the time, slide the  and/or  button around the clock or tap the time field. You can set:
 - **ON/OFF** – start/end time;
 - **ON** – only start time;
 - **OFF** – only end time.
4. Tap “Save” to save changes.

Tap  to delete the settings of the edited timer.

Tap “Cancel” to finish editing. You can save the changes made or reject them.

5. Tap “Timers” to finish editing.

8.6.2 Editing partition timers

1. Tap the timer name in the “Partition timers” section.
2. Select a day of the week / every day. The screen with timer settings will open.
3. Set the timer start/end time. To set the time, slide the  and/or  button around the clock or tap the time field. You can set:

- **ON/OFF** – start/end time;
- **ON** – only start time;
- **OFF** – only end time.

4. Select the partition arming type:

– Full;

– Full + bypasses;

– Stay;

– Stay, delay=0

5. Tap “Save” to save changes.

Tap  to delete the settings of the edited timer.

Tap “Cancel” to finish editing. You can save the changes made or reject them.

6. Tap the “Active” option to enable the timer.

7. Tap “Timers” to finish editing.

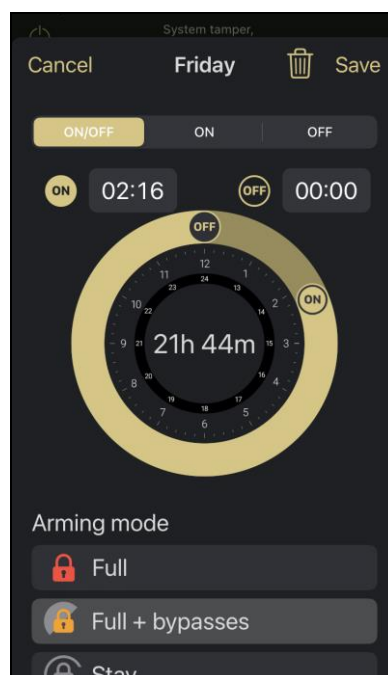

Fig. 19. INTEGRA CONTROL application. Editing the timer settings.

8.7 Cameras

This screen shows video footage from cameras (Fig. 20).

Fig. 20. INTEGRA CONTROL application. “Cameras” screen.

Tap  to display the video footage from camera(s) in full screen mode.

Tap  to change the number of videos displayed simultaneously on the screen.

Tap one of the videos. A new screen will open with video footage from the selected camera. You can activate macro commands assigned to that camera.

8.7.1 Video footage from camera

On the video screen you can control the macro commands assigned to the camera during its configuration (see: “Adding a camera”) (Fig. 21).

Tap  to change the video orientation to landscape. Tap  to return to portrait orientation.

Tap one of the videos. A new screen will open with video footage from the selected camera. You can activate macro commands assigned to that camera.

By default, the cameras display footage from the path provided in the “Substream” field.

 – the camera displays footage from the path provided in the “Substream” field – tap to display footage from the “Mainstream” path.

 – the camera displays footage from the path provided in the “Mainstream” field – tap to display footage from the “Substream” path.

Tap the video to exit and return to the “Cameras” screen.

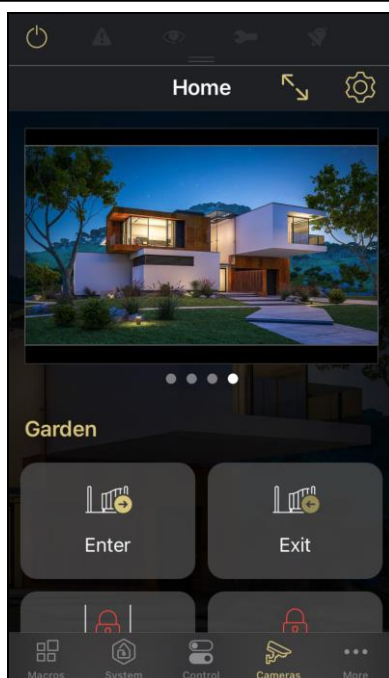

Fig. 21. INTEGRA CONTROL application. Video footage from camera.

8.8 Troubles

This screen contains a list of troubles and/or trouble memory.

When trouble memory is displayed, the  icon will be available on the bottom of the screen. Tap it to clear trouble memory (Fig. 22).

Fig. 22. INTEGRA CONTROL application. "Troubles" screen.

8.9 Events

This screen contains the control panel event log (Fig. 23). Swipe down to refresh the events.

The events are displayed only after the INTEGRA CONTROL application has been connected to the control panel.

The icons displayed next to each description inform about event types:

– alarm from zones,

– other alarm,

– arming/disarming,

– trouble/restart,

– bypass,

– access control,

– user function,

– system event.

You can save the event log to file. In order to do so, tap  and then choose how you want the file to be saved.

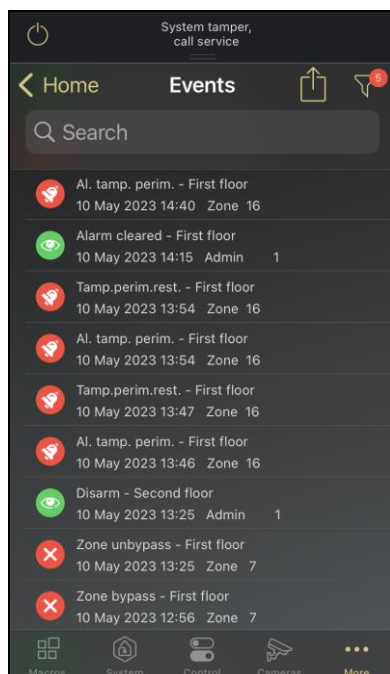

Fig. 23. INTEGRA CONTROL application. “Events” screen.

8.9.1 Filtering events

Use filtering to display on the “Events” screen only those events that meet specific criteria.

Tap  to open the events filtering screen (Fig. 24).

It allows you to filter events by:

- event types,
- partitions.

Filtering by event type

1. Tap the “Types” icon on the bottom of the screen.
2. A list of event types will be displayed.
3. Tap the event types you want to view.
4. Tap “Done” to complete the filtering. Those events that meet the selected criteria will be displayed.

Filtering by partitions

1. Tap the “Partitions” icon on the bottom of the screen.
2. A list of partitions will be displayed.
3. Tap the partitions from which you want to view events.
4. Tap “Done” to complete the filtering.

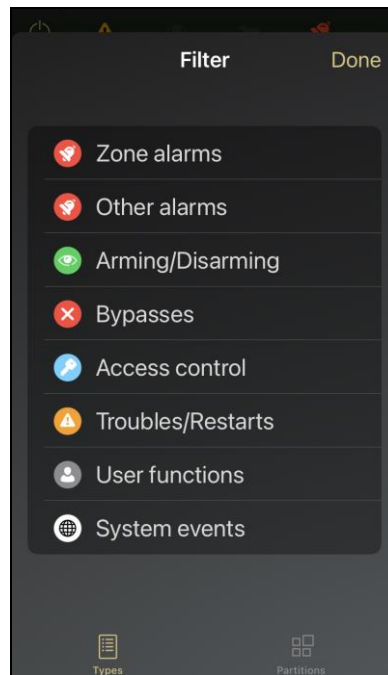

Fig. 24. INTEGRA CONTROL application. “Events” screen. Event filtering by event type.

8.10 Keypad

The virtual keypad enables you to operate and program the alarm system in the same way as with a physical keypad.

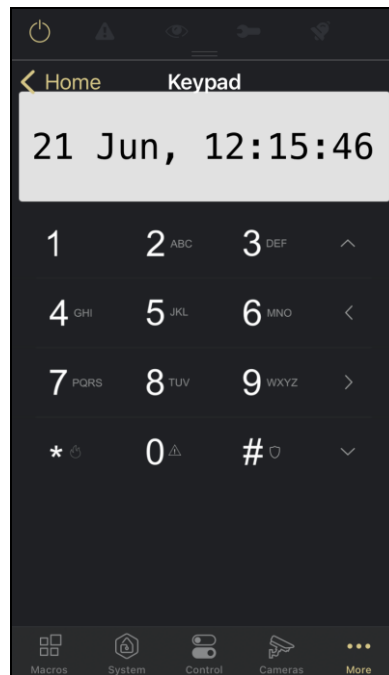

Fig. 25. INTEGRA CONTROL application. Virtual keypad.

8.11 Notifications

Fig. 26. INTEGRA CONTROL application. “Notifications” screen. Configuration of push notifications settings.

This screen allows you to configure the push notifications settings.

1. Tap “Add notifications”. The list of event types will be displayed.
2. Tap the event types that you want to be notified about (they will be highlighted in yellow on the left) (Fig. 26).

3. The icon on the right indicates:

– event does not generate a critical alert – tap if you want to change it.

– event generates a critical alert – tap if you want to change it.

Critical alerts always appear on your lock screen above all other notifications. The critical alert tone still plays when “Do Not Disturb” or silent mode is turned on in the device.

4. Go to the “Partitions” screen.

5. Select the partitions from which you wish to receive event notifications.

6. Tap “Save” to confirm the settings.

Push notifications will be displayed even when the application is turned off.

8.12 Help

The „Help” screen shows the icons used for notifications with explanation.

Tap „What’s new in the app” to see what has changed in the app.

9 Disconnecting from the control panel and logging out

In order to log out the current user of the control panel, tap and drag down the bar located on the top of the screen, and then tap “Logout”. You will be required to enter the control panel user password in order to connect to the control panel again.
